

SELF-FRAMED/MODULAR BUILDINGS

WARWICK STRUCTURES GROUP provides a wide range of self-framed building products that offer an economical alternative to conventional rigid framed structures. Our custom designed buildings can be delivered pre-erected or unassembled for field installation. We are able to supply buildings for a variety of applications – ranging from electrical substation enclosures to telecommunications buildings. With 30 years of steel building design, manufacturing and installation experience, our highly skilled and dedicated workforce is committed to maintaining an unparalleled level of quality and client satisfaction.

FEATURES

- Our efficient structural design provides a very economical alternative to rigid framed structures
- Our self-framing design is ideal for site constructed projects – erection time is reduced and there is no need for heavy equipment to erect the building
- Structural integrity built into the wall cladding minimizes erection time
- The exclusion of columns, rafters, and secondary members in the self-framing design reduces labour and equipment costs
- The maximum inside clearance for equipment layouts is achieved with our design which optimizes utilization of interior space
- Comprehensive project services available:
 - In-house team of professionals can provide structural and electrical engineering services, and design assistance upon request
 - Procurement and materials management (including HVAC integration and construction support)
 - Pre-assembly to final configuration prior to shipping
- Our building solutions are manufactured to comply with the following CSA certifications:
 - CSA A660 Certification of Manufacturers of Steel Building Systems
 - CSA W47.1 Certification of Companies for Fusion Welding of Steel

SELF-FRAMED/MODULAR BUILDINGS

VALUE-ADDED BENEFITS

- Our self-framed buildings can be designed as part of a modular system or for in-situ construction
- We offer full in-house design, engineering, drafting, detailing, project management, fabrication and erection services
- 20 acre modular construction yard in Calgary, AB provides the space to stage buildings and to integrate additional electrical or process equipment from third parties
- Our large and experienced team of field installers ensure we are able to complete your project, no matter where your site location is
- We have produced over 40,000 buildings in the past 15 years, so whether you need one lab building or six identical electrical control buildings, we have the expertise to execute your project

APPLICATIONS

- Electrical control buildings
- Master control center
- Remote instrumentation buildings
- Variable frequency drive buildings
- Instrument operations buildings
- Remote instrument buildings
- Multi-component power substations
- Pump stations
- Operator rooms/offices
- Wellhead shelters
- Generator enclosures
- Process buildings
- Wastewater treatment
- Guard houses
- Telecommunications
- Hazardous waste
- Lab buildings
- Custom accommodations
- Client specific integrated solutions
- Office complexes
- Acoustic or non-acoustic enclosures

CALL US TO SEE IF A SELF-FRAMED STRUCTURE CAN HELP LOWER YOUR PROJECT COSTS AND DECREASE TURN-AROUND TIME.
